DOCUMENT-IDENTIFIER: US 20030023473 A1

TITLE: METHOD AND ARTICLE OF MANUFACTURE FOR PROVIDING A COMPONENT BASED INTERFACE TO HANDLE TASKS DURING CLAIM PROCESSING

Detail Description Paragraph:

[1026] T_Long_Desc: A full-length textual description of C_Code--what the user will actually see (e.g., Close Supplement--Recovery, File Note, Workers Compensation)

Detail Description Paragraph:

[1464] After the claim level, all claimants are listed with their associated lines in a hierarchy format. When a claimant is added, a node is added to the tree, and the field identifying the claimant is listed as "Unknown". Once a participant has been identified, partial or client, the name of the claimant is listed on the level.

Detail Description Paragraph:

[1596] Injury is an aspect of participant information, which is related to the claimant participants on the claim. The participant component relates clients to all other claim-related entities. Information on injuries will be related to participant records and displayed at the participant level information in the Claim Folder. New entities are needed to implement injury data capture: injury and ICD-9 search. The Injury component interacts with five other components: Claim Folder--which contains Disability Management data about a claimant; Participant-which lists the individuals associated with the claim; as well as File Notes, Task Assistant and the Event Processor. The injury component also uses Microsoft WORD to create a formatted, historical injury report for a particular individual.
